Timber, Waler & Trench Jack Shoring Systems

Timber Shoring

Shore Hire carry a large range of Timber Shoring, including runners, walers and trench jacks. Timber Shoring is a trench support system for pipe laying maintenance and excavations that can be installed by hand, without the use of excavators. It is a very adaptable system suitable for many different situations including small access areas and the presence of cross services within the excavation.

TIMBER SPECIFICATIONS

Description	Size	Standard Length
Runners	140 x 45mm	3m or 4m
Walers	200 x 100mm	3m

Aluminium Waler Systems

Aluminium Walers available in different widths

When excavating in soils that require close or intermittent timber runners or trench sheeting, Shore Hire's Hydraulic Waler system is ideally suited to do the job.

Their lightweight construction allows for quick installation and removal. Aluminium Walers cover a wide range of various site specific shoring requirements, while maximising workspace within the open trench.

Combining the Aluminium Walers with the use of hydraulic Speed Struts, Timber Runner shoring or Trench Sheets can be braced to provide a two or four sided excavation.

ALUMINIUM WALER SPECIFICATIONS

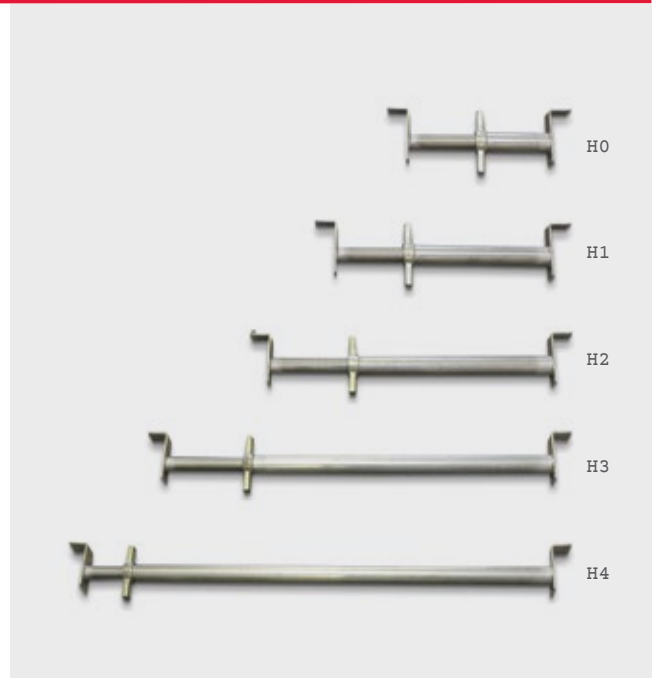

Length	2.4m
Width - Internal Waler to Waler SS950	400 to 910mm
Width - Internal Waler to Waler SS1450	710 to 1210mm
Weight Per Set	117kg min

Trench Jacks

Trench Jacks are used to support Timber Shoring and Trench Sheeting. The bracket heads are designed to sit on top of the timber walers that run horizontally along the trench.

TRENCH JACK SPECIFICATIONS

Size	Range (min)	Range (max)	WLL at max. ext.	Weight
H0	340mm	490mm	35kN	4.9kg
H1	450mm	780mm	31kN	6.5kg
H2	680mm	1080mm	15kN	8.3kg
H3	1060mm	1530mm	12kN	10.7kg
H4	1520mm	1980mm	10kN	13.3kg
